No need to sacrifice quality

Still get the same Ecert® quality to play at the same level as large, global certification bodies

Reliable

- Professional software based on Ecert® that sets you free from paper pushing and custom spreadsheets

- Simplifies administration of the certification process with default settings for data entry, export and use

- Web based so no installation required

- Central electronic database independent of location prevents data losses

- Increased integrity and reliability of data and processes

- Data security is guaranteed by a professional data processing centre and user rights and roles

- Real-time data

Inexpensive

- Get the power of Ecert® at an affordable price

- Cost and time savings for the certification process and the entire organization

- Efficient audit planning by time, location and qualification of auditors

- Electronic storage of data guarantees easy retrieval of information and faster processes

… And more

- Can be made available in your own language to meet your and your auditors' needs

- Continuous improvement and further development (regular system updates)

- Professional set-up, training and support that is cost and time conscious

- Enhance your competitive position

- Make accreditation as easy as possible

Give your clients more

With our family of solutions: *Ecert Basic*, *Group Integrity* and *Check Organic*, you can give your clients even more through positive synergistic connectivity. *Group Integrity* can help smallholder groups and companies with contract production manage their internal audits better and make certification with *Ecert Basic* even easier for you. And with *Check Organic*, you can make your certification data available to the world and make your audits even more efficient. Ask us for more information or visit our websites check-organic.com, group-integrity.com.

PROFESSIONALISING CERTIFICATION BODIES

Ecert Basic

- Is an off-the-shelf version of the leading audit and certification management solution, Ecert®, that gives you all its standard functionalities at a price that fits your budget.

- Provides a comprehensive set of tools to facilitate the management of your certification body from administration and preparation work to inspection/ audit work to follow-up work in an efficient, reliable and highly cost-effective manner.

Ecert Basic
manage. certify. ready for use.

Ecert® or *Ecert Basic*?

Ecert® is the leading professional software for database driven audit management, administration and CRM. Over time, Ecert® has developed into a multifunctional tool that gives its users many more features on top of its core functionality. Ecert® offers a high degree of flexibility and can be customized to meet the needs of your certification body. But not all certification bodies are ready for Ecert®.

*Ecert Basic* is an easy to use, affordable solution focused on Ecert®'s core functionality.

Small, local certifiers should be able to deliver the same performance as globally active ones. This can be challenging and sometimes even overwhelming with the audit and reporting demands of accreditors, the need to professionally manage data and the investments needed on all levels at the same time. This is why we developed *Ecert Basic*. Choose Ecert Basic and make a solid investment in further professionalising your certification body today.

Process Control

Manage your audit/ certification process from start to finish including contracts, inspections/ audits, certification (status per crop/ field and standard), non-conformities based on deadlines and issuance of certificates and transaction certificates

Use *Ecert Basic* for:

Documentation of operator data, inspection and certification data, contracts, field and crop data – assign operators using pre-set system groups or your own custom groups

Upload documents (unlimited) to your operator's data

Use electronic checklist(s) templates to document findings during the inspection/ audit and integrate individual checklists to accommodate your specific services

Facilitate the work of inspectors/ auditors with the web portal and offline client

Share essential data with your clients on a regular basis and invite them to upload data

Generate invoices based on existing quotes and on data related to a specific customer or inspector

Create analyses and reports for statistics, lists and other necessary deliverables with pre-set and editable tools

Manage all samples taken from inspections and save corresponding analyses' results

Send notifications and reminders based on settings in the system automatically

Find, export and print relevant data in xls, xml, csv or pdf formats and use the fully integrated Microsoft Office programs (Excel, Word)
